

Testing Card

Application

* Proposed Concept

Application that will act as a central repository to provide freshman & incoming students information about the iit campus, food, court, open building/facilities, and other specific information.

① Hypothesis

We believe that current iit platforms lack information and are outdated. The info is also too spread out, making it difficult/inefficient for a user to find.

② Test

Release a beta application to freshman/transfer students (test it on all IIT students as well)

③ Metric

User feedback on ~~how~~ their user experience. Secondary metric includes number of successful user data queries v.s failed data queries.

④ Criteria

There will be an increase usage on our platform throughout IIT and beyond.
